North Miami Beach, FL 33162-3100

## **RE: Dezer Intracoastal Mall LLC / Intracoastal Mall Redevelopment – 3501 Sunny Isles Boulevard, North Miami Beach, Florida (the “Property”)**

Dear Mr. Proffitt:

This letter and associated enclosures shall serve as the Applicant’s response to the additional comments issued by the Corradino Group dated June 30, 2020. In addition to the responses provided herein, enclosed please find 1) responses to the comments, and 2) the updated traffic impact analysis, both prepared by Kimley-Horn and Associates, Inc., and dated July 2, 2020. The traffic study has been revised as requested by City Staff and the Corradino Group to reflect and include the additional data and analysis requested by the aforementioned comments.

With this letter we hereby confirm that the project complies with Section 24-58.7(O)(2)(e) of the Land Development Code, which provides that a condition for approval of a development requires the following public service compliance:

The developer shall be required to provide for multiple access points with direct east and west access to and from SR 826 and traffic mitigation such that the development does not overburden NE 35th Avenue.

The conceptual plan submitted for the project provides multiple access points that include direct east and west access to and from SR 826 and traffic improvements that result in an improved level of service on NE 35th Avenue, as detailed below.

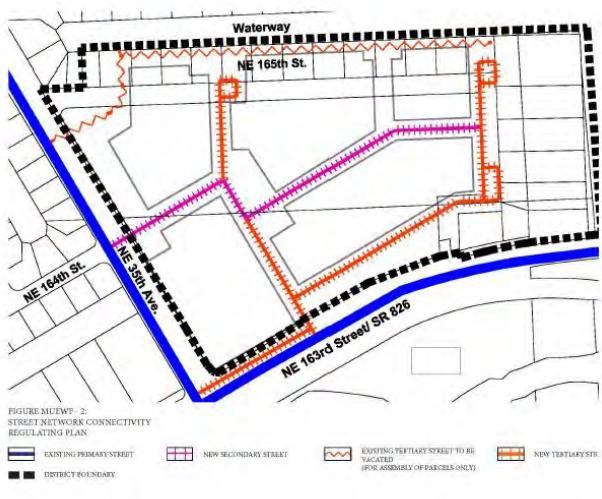

# Dezer Intracoastal Mall

July 2, 2020

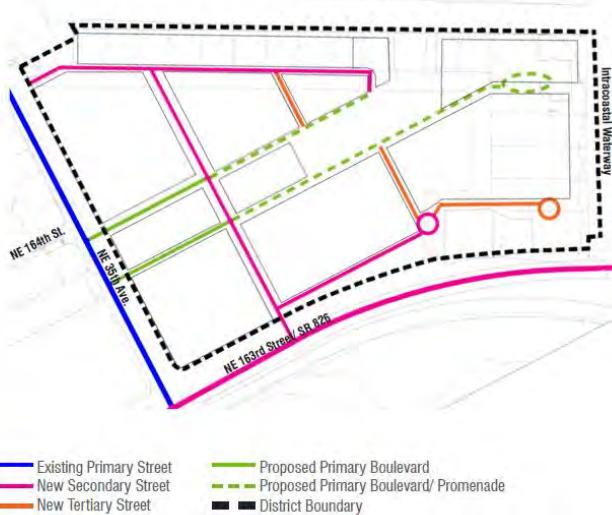

Page 2

As part of the district regulations for the MU/EWF district that govern the development of the subject property, a series of regulating plans were adopted that set forth the design standards for the project. Figure MU/EWF-2: Street Network Connectivity Regulating Plan (“Figure MU/EWF-2”) provides the approximate location of existing and required new streets, and hierarchy of said streets, needed to create the prescribed network of streets within the project. In fact, Figure MU/EWF-2 is being proposed to be modified in order to provide additional access for the Property and improve the project’s connectivity, including additional access points, as shown below:

Existing

Proposed

In the current version of Figure MU/EWF-2, the two project access points are identified at 1) NE 35 Avenue and NE 164 Street, and 2) a frontage road with a potential connection to SR 826 at NE 36 Avenue/Intracoastal Mall Driveway. In the proposed version, three project access points are identified at 1) NE 165 Street and NE 35 Avenue, 2) at NE 164 Street and NE 35 Avenue, and 3) a new intersection at NE 36 Avenue/Intracoastal Mall Driveway.

In both versions of Figure MU/EWF-2, the direct east and west access to and from SR 826 is shown as NE 36 Avenue/Intracoastal Mall Driveway. The project proposes to signalize the intersection of SR 826 and NE 36 Avenue/Intracoastal Mall Driveway. This new intersection is located at the only feasible location available for direct east and west access to SR 826 given the existing conditions, including, land topography, bridge gates on SR 826, intersection and signalization distance requirements, and ownership constraints. It is important to note that even though required by the Land Development Code, this new intersection will require the approval of a variance from the FDOT Access Management Variance Committee. This request to FDOT is supported by the City, as evidenced by the letter from the City Manager dated June 23, 2020, attached hereto for your reference. The variance approval is anticipated to be obtained on August 6, 2020.

Finally, Section 24-58.7(O)(2)(e) requires that the street network connections associated with the project does not overburden NE 35 Avenue. The project complies with this requirement. The results of the traffic study confirm that the overall combined left-turn and right-turn lane queues

Dezer Intracoastal Mall

July 2, 2020

Page 3

along NE 35 Avenue are expected to decrease under future total with improvements conditions when compared to future background conditions and future total conditions. Additionally, the eastbound left-turn storage lanes are able to accommodate the expected vehicle queues along SR 826/NE 163rd Street at NE 35 Avenue and NE 36 Avenue/Intracoastal Mall Driveway under future total with improvements conditions.

As noted above, the complete responses to the supplemental comments and the updated traffic impact analysis are enclosed for your review. If you have any questions or require additional information, please contact me.

Respectfully submitted,

HOLLAND & KNIGHT LLP

Tracy R. Slavens, Esq.

**RESPONSES TO CORRADINO COMMENTS**  
**AND UPDATED TRAFFIC STUDY DATED JULY 2020**

## MEMORANDUM

To: Justin Proffitt, AICP  
City of North Miami Beach

From: Adrian K. Dabkowski, P.E., PTOE 

Date: July 2, 2020

***Subject: Intracoastal Mall Redevelopment  
Response to the Corradino Group***

We have received additional comments on June 30, 2020. We offer the following additional responses and information:

1. Prior to site plan approval, the Applicant must obtain design approval from the FDOT Access Management Board. This approval shall be for the design presented in the Master Plan or a comparable design which satisfies Section 24-58.7(O)(e) - Eastern Mixed-Use Waterfront District (MU/EWF) pertaining to an access point with direct east and west access to and from SR 826/NE 163rd Street and traffic mitigation such that the development does not over burden NE 35th Avenue.

*Response: The Applicant agrees to comply with this condition.*

Corradino Response: Condition Addressed.

***Additional Response: As an update, the project is schedule for the next FDOT Access Management Variance Committee hearing. The hearing is currently scheduled for August 6.***

3. Prior to the first site plan approval, the developer must provide mitigation measures to reduce project impacts at the intersection of Biscayne Boulevard and NE 163rd Street in order to not further degrade the overall intersection volumes during the P.M. peak hour under future total and future total with improvements conditions as outlined in the Traffic Impact Analysis dated and submitted to the City of North Miami Beach and the Florida Department of Transportation on February 2020 and updated March 2020.

*RESPONSE: The Applicant has worked with the City's traffic consultants to re-analyze the existing and future level of service at the intersection of Biscayne Boulevard and NE 163 Street based on enhanced multi-modal facilities agreed to during the review process. The revised analysis is dated June 2020 and is attached to this response. The current level of service at the intersection is LOS E+50. The project is unique in many respects but, most importantly, it emphasizes and encourages multi-modal transportation and has thus incorporated transit, bicycle, and pedestrian facilities into the design. Therefore, the multi-modal factor utilized in the updated traffic impact analysis is 15%. As a result of the incorporation of this enhanced multi-modal factor in the analysis, the future projected level of service for intersection of Biscayne Boulevard and NE 163 Street with the project will be LOS E+49. Based on this*

*updated analysis, the project results in an improved level of service for the intersection, has no negative impacts on the intersection, and no mitigation measures are required.*

CORRADINO RESPONSE: This condition has been addressed. The Adopted Level of Service for this intersection is LOS E+50 per the City of North Miami Beach Transportation Master Plan and prior traffic studies conducted with the City of North Miami Beach. As the response above demonstrates, the mitigation measures taken based on the enhanced multi-modal facilities along the corridor improves the level of service at the intersection of Biscayne Boulevard and NE 163rd Street to LOS E+49. The applicant should include language that clarifies the Adopted Level of Service at this intersection and its mitigation as part of the narrative in the Traffic Impact Study.

***Additional Response: The traffic study was updated to account for all the multimodal improvements requested by the City of North Miami Beach and Florida Department of Transportation and is contained in Attachment A.***

*A multimodal (public transit, bicycle, and pedestrian) reduction factor of 10 percent (10%) multimodal factor was applied to future total conditions without improvements. Note that a 15.0 percent (15.0%) was applied to the trip generation calculations for future total conditions with improvements as the project proposes a significant amount of multimodal improvements. These improvements will make it easier and encourage residents, employees, and patrons to walk/bike or use public transit to and from the development and surrounding areas. These multimodal improvements include:*

- *A westbound buffered bicycle lane fronting the project on SR 826/NE 163rd Street.*
- *A shared bicycle lane in the frontage road west of NE 35th Avenue on SR 826/NE 163rd Street.*
- *Providing transit shelters at the bus station on SR 826/NE 163rd Street at NE 35th Avenue*
- *Providing an enhanced pedestrian crossing and refuge island on SR 826/NE 163rd Street at NE 35th Avenue.*
- *A shared use path fronting the project on SR 826/NE 163rd Street.*
- *An enhanced bus station along northbound NE 35th Avenue north of 826/NE 163rd Street*

*Furthermore, a water taxi, shuttle, or other transient water borne transportation is proposed to operate along the Intracoastal Waterway. Miami-Dade Transit (MDT) and the City of North Miami Beach provide bus service to and from the project area via three (3) routes:*

- *Route 105/Route E operates along SR 826/NE 163rd Street within the vicinity of the project. This route serves the Golden Glades Park & Ride Lot, Aventura Mall, and the Gulfstream Park. This route operates with 30-minute headways during the A.M. and P.M. peak hours and provides connecting service to 13 additional MDT bus routes.*

- **Route 108/Route H operates along SR 826/NE 163rd Street within the vicinity of the project. This route serves Haulover Park and the 163rd Street Mall. This route operates with 30-minute headways during the A.M. and P.M. peak hours and provides connecting service to 14 additional MDT bus routes.**
- **North Miami Beach's free trolley NMB-Line Route A operates along SR 826/NE 163rd Street within the vicinity of the project. The route originates at the Intracoastal Mall and offers connections to other routes serving City Hall, Fulford Elementary, Florida International University, and Nova University. This route operates with 60-minute headways during the A.M. and P.M. peak hours and provides connecting service to 12 additional MDT bus routes.**

**The intersection capacity tables 3 and 4 were updated to include the adopted level of service at each intersection. Note that the results of the intersection capacity analyses indicate that the study intersections are expected to operate at City of North Miami Beach's adopted levels of service (LOS) or better under existing, future background without project, and future total with project and improvements during the A.M and P.M. peak hours. Note that the intersection of SR 826/NE 163rd Street and Biscayne Boulevard/US-1 is expected to operate at LOS F under future total conditions without improvements.**

4. Prior to the first Certificate of Occupancy, applicant shall demonstrate through its plans, improved or maintained levels of transit service to the development, including accessibility and transferability between existing transit lines. Applicant will maintain or enhance the current level of service by allowing for onsite access in the form of a premium transit facility with collocated transit stops for the North Miami Beach and Sunny Isles Beach, at that agency's option, trolley systems. The premium transit facility shall include features at a minimum, but not limited to, premium shelters or facilities; digital routing displays, including real time information; seating; and WiFi hotspots. The premium transit facility shall be ADA compliant.

**RESPONSE:** *The Applicant agrees to comply with this condition to the extent it is feasible. Transit stops to serve the project are located on NE 163 Street and NE 35 Avenue and premium shelter facilities are contemplated at these stops. It is important that the city acknowledge that transit routes do not typically enter private property or travel on private driveways. The Applicant has previously committed to providing premium transit shelters. Exhibit F-1 to the Development Agreement "Roadway Transportation Facilities," which has been submitted to the City for review, provides:*

**EXHIBIT F-1  
PUBLIC FACILITIES  
Roadway Transportation Facilities:**

*In accordance with Section 163.3227(1)(d), Florida Statutes (2020), the proposed development will be serviced by those roadway transportation facilities currently in existence as provided by state, county, and local roadways. The proposed development will also be serviced by public transportation facilities currently in existence, as provided by Miami-Dade County, the City of North Miami Beach, and such other governmental entities as may presently operate public transportation services within the City of North Miami Beach. Certain enhancements to the*

*existing transportation and transit infrastructure, such as premium transit shelters, including, but not limited to, transit shelters with digital displays, Wi-Fi access, and/or seating accommodations, and traffic signalization be considered at the time of Site Plan review.*

CORRADINO RESPONSE: Acceptance of this comment is predicated on the applicant providing on-site premium shelters, in addition to any additional transit improvements for stops on NE 163rd Street and NE 35th Avenue.

***Additional Response: Noted.***

We trust that this response adequately addresses the comment provided. Please contact us should you have any questions.

## EXECUTIVE SUMMARY

Dezer Intracoastal Mall, LLC is proposing to redevelop the property located at 3789 NE 163<sup>rd</sup> Street in North Miami Beach, Florida. The site proposed for redevelopment is currently occupied by 189,026 square feet of shopping center and a 45,000 square-foot supermarket. The proposed redevelopment consists of 200,000 square feet of office space, 280,000 square feet of shopping center, a 50,000 square-foot supermarket, 45,000 square feet of gym space, 2,000 multifamily residential units (35 Low-Rise, 48 Mid-Rise, and 1917 High-Rise units), and a 250-room hotel. The redevelopment is expected to be completed by year 2031.

Access to the existing development is provided via one (1) limited-access (right-in/right-out) driveway along NE 163<sup>rd</sup> Street east of NE 35<sup>th</sup> Avenue, one (1) full-access driveway at the signalized intersection of NE 164<sup>th</sup> Street and NE 35<sup>th</sup> Avenue, and one (1) limited-access (right-in/right-out/left-out) driveway at the intersection of NE 35<sup>th</sup> Avenue and Intracoastal Mall Driveway.

The project proposes improvements including signalizing the intersection of SR 826/NE 163<sup>rd</sup> Street and Intracoastal Mall Driveway, the addition of one (1) southbound left-turn lane, the addition of one (1) eastbound left-turn lane, and the addition of one (1) receiving lane to the west leg. The new signal would operate similar to the current operations of the signalized intersection of SR 826/NE 163<sup>rd</sup> Street and NE 35<sup>th</sup> Avenue with eastbound partial continuous green T-intersection, signalized southbound left- and right-turn lanes, signalized eastbound left-turn lanes, and signalized westbound through and right-turn lanes. Furthermore, the proposed improvements include the addition of one (1) eastbound left-turn lane at the intersection of SR 826/NE 163<sup>rd</sup> Street and NE 35<sup>th</sup> Avenue and the elimination of the exclusive westbound left-turn lane along Frontage Road at NE 34<sup>th</sup> Street. The intersection of SR 826/NE 163<sup>rd</sup> Street and NE 35<sup>th</sup> Avenue is proposed to be modified to remove the eastbound partial continuous green T-intersection as well as the exclusive pedestrian phase. The configuration of this intersection is proposed to include signalized eastbound through and left-turn lanes, signalized southbound left and right-turn lanes, and signalized westbound through and shared through/right-turn lanes. The proposed improvements satisfy the City of North Miami Beach's Eastern Mixed-Use Waterfront

District (MU/EWF) code requirements by providing for multiple access points with direct east and west access to and from SR 826/NE 163<sup>rd</sup> Street and traffic mitigation such that the development does not over burden NE 35<sup>th</sup> Avenue.

The results of the intersection capacity analyses indicate that the study intersections are expected to operate at City of North Miami Beach's adopted levels of service (LOS) or better under existing, future background without project, and future total with project and improvements during the A.M and P.M. peak hours. Note that the intersection of SR 826/NE 163rd Street and Biscayne Boulevard/US-1 is expected to operate at LOS F under future total conditions without improvements.

A 95<sup>th</sup> percentile queue analysis was performed to identify the expected vehicle queues at the intersections of SR 826/NE 163<sup>rd</sup> Street at NE 35<sup>th</sup> Avenue and SR 826/NE 163<sup>rd</sup> Street at Intracoastal Mall Driveway. The eastbound left-turn lanes and southbound left-turn and right-turn lanes queues were examined. The westbound approach queue at the intersection of SR 826/NE 163<sup>rd</sup> Street and Intracoastal Mall Driveway was also examined. The queue length analysis was prepared for existing, future background, future total, and future total with improvements analysis conditions. The results of the analysis indicate that the overall combined left-turn and right-turn lane queues along NE 35<sup>th</sup> Avenue are expected to decrease under future total with improvements conditions when compared to future background conditions and future total conditions. Additionally, the eastbound left-turn storage lanes are able to accommodate the expected vehicle queues along SR 826/NE 163<sup>rd</sup> Street at NE 35<sup>th</sup> Avenue and Intracoastal Mall Driveway under future total with improvements conditions. Furthermore, the westbound through-lane queues at Intracoastal Mall Driveway are not expected to extend to the bridge gates on SR 826/NE 163<sup>rd</sup> Street for when the bridge is drawn closed.

A signal warrant analysis was conducted at the intersection of SR 826/NE 163<sup>rd</sup> Street and Intracoastal Mall Driveway under future total with improvements conditions and determined that the intersection satisfies Warrant 2 and Warrant 3. Therefore, a signal is recommended for installation at this intersection under future total with improvements conditions.

## INTRODUCTION

Dezer Intracoastal Mall, LLC is proposing to redevelop the property located at 3789 NE 163<sup>rd</sup> Street in North Miami Beach, Florida. The site proposed for redevelopment is currently occupied by 189,026 square feet of shopping center and a 45,000 square-foot supermarket. The proposed redevelopment consists of 200,000 square feet of office space, 280,000 square feet of shopping center, a 50,000 square-foot supermarket, 45,000 square feet of gym space, 2,000 multifamily residential units (35 Low-Rise, 48 Mid-Rise, and 1917 High-Rise units), and a 250-room hotel. A project location map is provided as Figure 1. The redevelopment is expected to be completed by year 2031. A conceptual site plan is included in Appendix A.

Kimley-Horn and Associates, Inc. has completed this traffic impact analysis for submittal to the City of North Miami Beach. The purpose of the study is to assess the proposed redevelopment's impact on the surrounding transportation network. This report summarizes the data collection, project trip generation and distribution, capacity analysis, queuing analysis, and signal warrant analysis. Methodology correspondence detailing the traffic study requirements is included in Appendix B.

## EXISTING TRAFFIC

A.M. peak period (7:00 to 9:00 A.M.) and P.M. peak period (4:00 to 6:00 P.M.) turning movement counts were collected on May 14, 2019 (Tuesday) at the following intersections:

- SR 826/NE 163<sup>rd</sup> Street and Biscayne Boulevard/US-1
- SR 826/NE 163<sup>rd</sup> Street and NE 26<sup>th</sup> Avenue
- SR 826/NE 163<sup>rd</sup> Street and NE 28<sup>th</sup> Avenue
- SR 826/NE 163<sup>rd</sup> Street and NE 2900 Block
- SR 826/NE 163<sup>rd</sup> Street and NE 34<sup>th</sup> Avenue
- SR 826/NE 163<sup>rd</sup> Street and NE 35<sup>th</sup> Avenue
- SR 826/NE 163<sup>rd</sup> Street and Intracoastal Mall Driveway
- NE 164<sup>th</sup> Street and NE 35<sup>th</sup> Avenue

Additionally, turning movement counts were collected on October 10, 2019 (Thursday) at the intersection of NE 35<sup>th</sup> Avenue and Intracoastal Mall Drive North/NE 165<sup>th</sup> Street.

All volumes were collected in 15-minute intervals. All traffic counts were adjusted to peak season conditions. Please note that the appropriate Florida Department of Transportation (FDOT) peak season factors for study area intersections are 1.03 and 1.01. Signal timing information was obtained from Miami-Dade County Department of Transportation and Public Works – Traffic Signals and Signs Division for all study area signalized intersections.

The turning movement counts, FDOT peak season factor category report, and signal timing data are included in Appendix C. Figure 2 presents the existing turning movement volumes at the study intersections during the weekday A.M. and P.M. peak hours.

Intracoastal Mall Redevelopment  
North Miami Beach, Florida

## FUTURE BACKGROUND TRAFFIC

Future background traffic conditions are defined as expected traffic conditions on the roadway network in the year 2031 without project traffic. Future background traffic volumes used in the analysis are the sum of the existing traffic, an additional amount of traffic generated by growth in the study area, and traffic generated from committed developments in the proximity of the study area. Refer to Figure 3 for the year 2031 peak hour background traffic volumes during the weekday A.M. and P.M. peak hours.

### **Background Area Growth**

Future traffic growth on the transportation network was determined based upon historic growth trends at nearby FDOT traffic count stations and a comparison of the 2010 and 2040 traffic volume plots from the Florida Standard Urban Transportation Model Structure (FSUTMS) Southeast Florida Regional Planning Model (SERPM). The following FDOT count stations were referenced for this analysis:

- FDOT count station no. 0269 located on SR-A1A/Collins Avenue, 200 feet north of NE 172<sup>nd</sup> Street
- FDOT count station no. 0556 located on SR-826/NE 163<sup>rd</sup> Street, 1,700 feet east of SR-5/US-1
- FDOT count station no. 2645 located on SR-A1A/Collins Avenue, 200 feet north of Miami Beach Boulevard
- FDOT count station no. 5219 located on SR-5/US-1, 300 feet south of NE 163<sup>rd</sup> Street/Sunny Isles Causeway
- FDOT count station no. 8452 located on NE 35<sup>th</sup> Avenue, 200 feet north of NE 166<sup>th</sup> Street

The linear growth trend yielded a growth rate of 1.05 percent (1.05%) over the most recent five (5) year period and 0.78 percent (0.78%) over the most recent ten (10) year period. The exponential growth trend yielded a growth rate of 1.10 percent (1.10%) over the most recent five (5) year period and 0.77 percent (0.77%) over the most recent ten (10) year period. The decaying exponential growth trend yielded a growth rate of 1.58 percent (1.58%) over the most recent five (5) year period and 1.10 percent (1.10%) over the most recent ten (10) year period.

Based on the volume information obtained from the years 2010 and 2040 FSUTMS SERPM model, an annual growth rate of 1.02 percent (1.02%) in the vicinity of the development was calculated.

The growth rate with the highest R-squared value, 1.10 percent (1.10%), was applied annually to the existing traffic volumes for future (2031) background conditions. The worksheets used to analyze the historic growth trends along with the FSUTMS transportation model outputs are included in Appendix D.

### **Committed Developments**

The following committed developments were included as part of future background and future total traffic conditions:

- Uptown Biscayne Development
- 15780 West Dixie Highway (New North Town Center)

Committed development trip assignment data is included in Appendix E. Volume development worksheets for the study intersections are included in Appendix F.

Intracoastal Mall Redevelopment  
North Miami Beach, Florida

## PROJECT TRAFFIC

Project traffic is defined as the vehicle trips expected to be generated by the project and the distribution and assignment of that traffic over the study roadway network.

### Existing and Proposed Land Uses

The site proposed for redevelopment is currently occupied by 189,026 square feet of shopping center and a 45,000 square-foot supermarket. The proposed redevelopment consists of 200,000 square feet of office space, 280,000 square feet of shopping center, a 50,000 square-foot supermarket, 45,000 square feet of gym space, 2,000 multifamily residential units (35 Low-Rise, 48 Mid-Rise, and 1917 High-Rise units), and a 250-room hotel. The redevelopment is expected to be completed by year 2031.

### Project Access

Access to the existing development is provided via one (1) limited-access (right-in/right-out) driveway along NE 163<sup>rd</sup> Street east of NE 35<sup>th</sup> Avenue, one (1) full-access driveway at the signalized intersection of NE 164<sup>th</sup> Street and NE 35<sup>th</sup> Avenue, and one (1) limited-access (right-in/right-out/left-out) driveway at the intersection of NE 35<sup>th</sup> Avenue and Intracoastal Mall Driveway.

The project proposes improvements including signalizing the intersection of SR 826/NE 163<sup>rd</sup> Street and Intracoastal Mall Driveway, the addition of one (1) southbound left-turn lane, the addition of one (1) eastbound left-turn lane, and the addition of one (1) receiving lane to the west leg. The new signal would operate similar to the current operations of the signalized intersection of SR 826/NE 163<sup>rd</sup> Street and NE 35<sup>th</sup> Avenue with eastbound partial continuous green T-intersection, signalized southbound left- and right-turn lanes, signalized eastbound left-turn lanes, and signalized westbound through and right-turn lanes. Furthermore, the proposed improvements include the addition of one (1) eastbound left-turn lane at the intersection of SR 826/NE 163<sup>rd</sup> Street and NE 35<sup>th</sup> Avenue and the elimination of the exclusive westbound left-turn lane along Frontage Road at NE 34<sup>th</sup> Street. The intersection of SR 826/NE 163<sup>rd</sup> Street and NE 35<sup>th</sup> Avenue is proposed to be modified to remove the eastbound partial continuous green T-

intersection as well as the exclusive pedestrian phase. The configuration of this intersection is proposed to include signalized eastbound through and left-turn lanes, signalized southbound left and right-turn lanes, and signalized westbound through and shared through/right-turn lanes. The proposed improvements satisfy the City of North Miami Beach's Eastern Mixed-Use Waterfront District (MU/EWF) code requirements by providing for multiple access points with direct east and west access to and from SR 826/NE 163<sup>rd</sup> Street and traffic mitigation such that the development does not over burden NE 35<sup>th</sup> Avenue. An exhibit summarizing the proposed access improvements is contained in Appendix G.

### **Trip Generation**

Trip generation for the existing development and proposed redevelopment were calculated using rates and equations contained in the Institute of Transportation Engineers' (ITE) *Trip Generation Manual*, 10<sup>th</sup> Edition. Trip generation calculations for the existing development were performed using ITE Land Use Codes (LUC) 820 (Shopping Center) and LUC 850 (Supermarket). Trip generation calculations for the proposed redevelopment were performed using LUC 710 (General Office Building), LUC 820 (Shopping Center), LUC 850 (Supermarket), LUC 492 (Health/Fitness Club), LUC 222 (Multifamily Housing [High-Rise]), LUC 221 (Multifamily Housing [Mid-Rise]), LUC 220 (Multifamily Housing [Low-Rise]), and LUC 310 (Hotel). Project trips were estimated for the weekday A.M. and P.M. peak hours.

### **Multimodal Reduction**

A multimodal (public transit, bicycle, and pedestrian) reduction factor of 10 percent (10%) multimodal factor was applied to future total conditions without improvements. Note that a 15.0 percent (15.0%) was applied to the trip generation calculations for future total conditions with improvements as the project proposes a significant amount of multimodal improvements. These improvements will make it easier and encourage residents, employees, and patrons to walk/bike or use public transit to and from the development. These multimodal improvements include:

- A westbound buffered bicycle lane fronting the project on SR 826/NE 163rd Street.
- A shared bicycle lane in the frontage road west of NE 35<sup>th</sup> Avenue on SR 826/NE 163<sup>rd</sup> Street.

- Providing transit shelters at the bus station on SR 826/NE 163rd Street at NE 35th Avenue
- Providing an enhanced pedestrian crossing and refuge island on SR 826/NE 163rd Street at NE 35th Avenue.
- A shared use path fronting the project on SR 826/NE 163rd Street.
- An enhanced bus station along northbound NE 35<sup>th</sup> Avenue north of 826/NE 163<sup>rd</sup> Street

Furthermore, a water taxi, shuttle, or other transient water borne transportation is proposed to operate along the Intracoastal Waterway. Miami-Dade Transit (MDT) and the City of North Miami Beach provide bus service to and from the project area via three (3) routes:

- Route 105/Route E operates along SR 826/NE 163<sup>rd</sup> Street within the vicinity of the project. This route serves the Golden Glades Park & Ride Lot, Aventura Mall, and the Gulfstream Park. This route operates with 30-minute headways during the A.M. and P.M. peak hours and provides connecting service to 13 additional MDT bus routes.
- Route 108/Route H operates along SR 826/NE 163<sup>rd</sup> Street within the vicinity of the project. This route serves Haulover Park and the 163<sup>rd</sup> Street Mall. This route operates with 30-minute headways during the A.M. and P.M. peak hours and provides connecting service to 14 additional MDT bus routes.
- North Miami Beach's free trolley NMB-Line Route A operates along SR 826/NE 163<sup>rd</sup> Street within the vicinity of the project. The route originates at the Intracoastal Mall and offers connections to other routes serving City Hall, Fulford Elementary, Florida International University, and Nova University. This route operates with 60-minute headways during the A.M. and P.M. peak hours and provides connecting service to 12 additional MDT bus routes.

Detailed route information and headway data is provided in Appendix H.

### **Internal Capture**

A portion of trips generated by the redevelopment will be captured internally on the site. Internal capture rates were based upon values contained in ITE's *Trip Generation Handbook*, 3<sup>rd</sup> Edition. The expected internal capture rate for the proposed redevelopment is 5.8 percent (5.8%) during

the A.M. peak hour and 29.0 percent (29.0%) during the P.M. peak hour. Internal capture calculations are contained in Appendix I.

### **Pass-By Capture**

Pass-by capture rates were determined based on average rates provided in ITE's *Trip Generation Handbook*, 3<sup>rd</sup> Edition. The pass-by capture rate for the existing and proposed shopping center is 34.0 percent (34.0%) during the P.M. peak hour. The pass-by capture rate for the existing and proposed supermarket is 36.0 percent (36.0%) during the P.M. peak hour.

### **Net New Project Trips**

The project is expected to generate 771 net new weekday A.M. peak hour vehicular trips and 597 net new weekday P.M. peak hour vehicular trips. Table 1 summarizes the proposed trip generation for the redevelopment. Detailed trip generation calculations for the project are presented in Appendix I.

<b>Table 1: Proposed Trip Generation</b>				
<b>A.M. (P.M.) Peak Hour Driveway Volume</b>				
<b>Future Land Use (ITE Code)</b>	<b>Scale</b>	<b>Net External Trips</b>	<b>Entering</b>	<b>Exiting</b>
<i>Existing Development</i>				
Shopping Center (820)	189,026 square feet	221 (517)	138 (248)	83 (269)
Supermarket (850)	45,000 square feet	155 (248)	93 (127)	62 (121)
<i>Proposed Redevelopment</i>				
General Office Building (710)	200,000 square feet	159 (134)	140 (11)	19 (123)
Shopping Center (820)	280,000 square feet	209 (498)	129 (258)	80 (240)
Supermarket (850)	50,000 square feet	152 (193)	91 (105)	61 (88)
Health/Fitness Club (492)	45,000 square feet	50 (90)	25 (53)	25 (37)
Multifamily Housing [High-Rise] (222)	1,917 dwelling units	457 (319)	110 (179)	347 (140)
Multifamily Housing [Mid-Rise] (221)	48 dwelling units	14 (11)	3 (6)	11 (5)
Multifamily Housing [Low-Rise] (220)	35 dwelling units	15 (11)	3 (6)	12 (5)
Hotel (310)	250 rooms	91 (106)	60 (50)	31 (56)
<i>Net New Redevelopment</i>				
<b>Net New Vehicle Trips (vehicles per hour)</b>		771 (597)	330 (293)	441 (304)

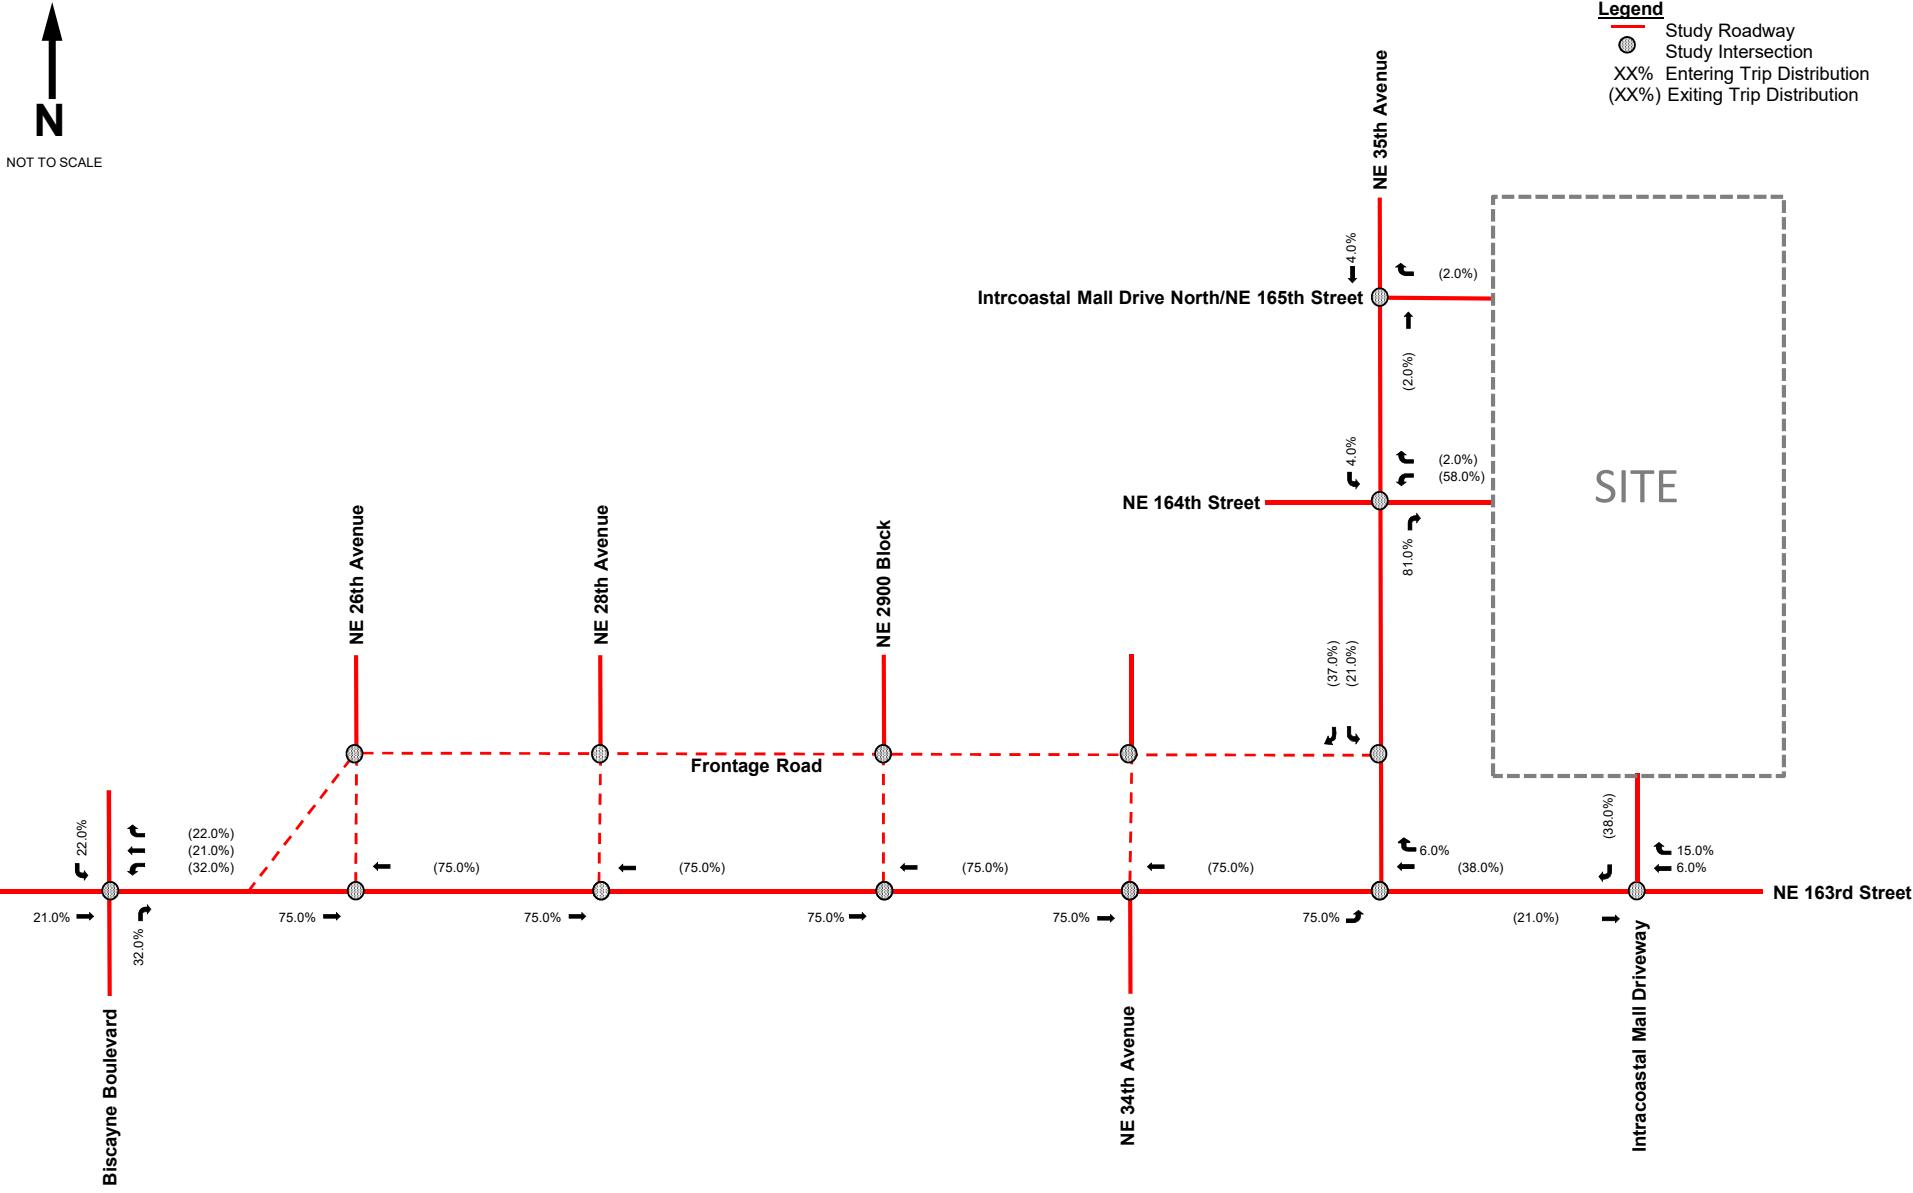

### **Trip Distribution and Assignment**

The likely distribution of project traffic was forecast for the trips expected to be generated by the proposed redevelopment. The trip distribution was based on an interpolated cardinal trip distribution for the project site's traffic analysis zone (TAZ) for the years 2010 and 2040 for the project's anticipated build-out year of 2031 obtained from the Miami-Dade Transportation Planning Organization's (TPO's) *Miami-Dade 2040 Long Range Transportation Plan Directional Trip Distribution Report*. The cardinal trip distribution for TAZ 91 is provided in Table 2. Detailed cardinal distribution calculations are contained in Appendix J.

**Table 2: Cardinal Trip Distribution**

<b>Cardinal Direction</b>	<b>Percentage of Trips</b>
North-Northeast	7%
East-Northeast	6%
East-Southeast	2%
South-Southeast	8%
South-Southwest	17%
West-Southwest	30%
West-Northwest	11%
North-Northwest	19%
Total	100%

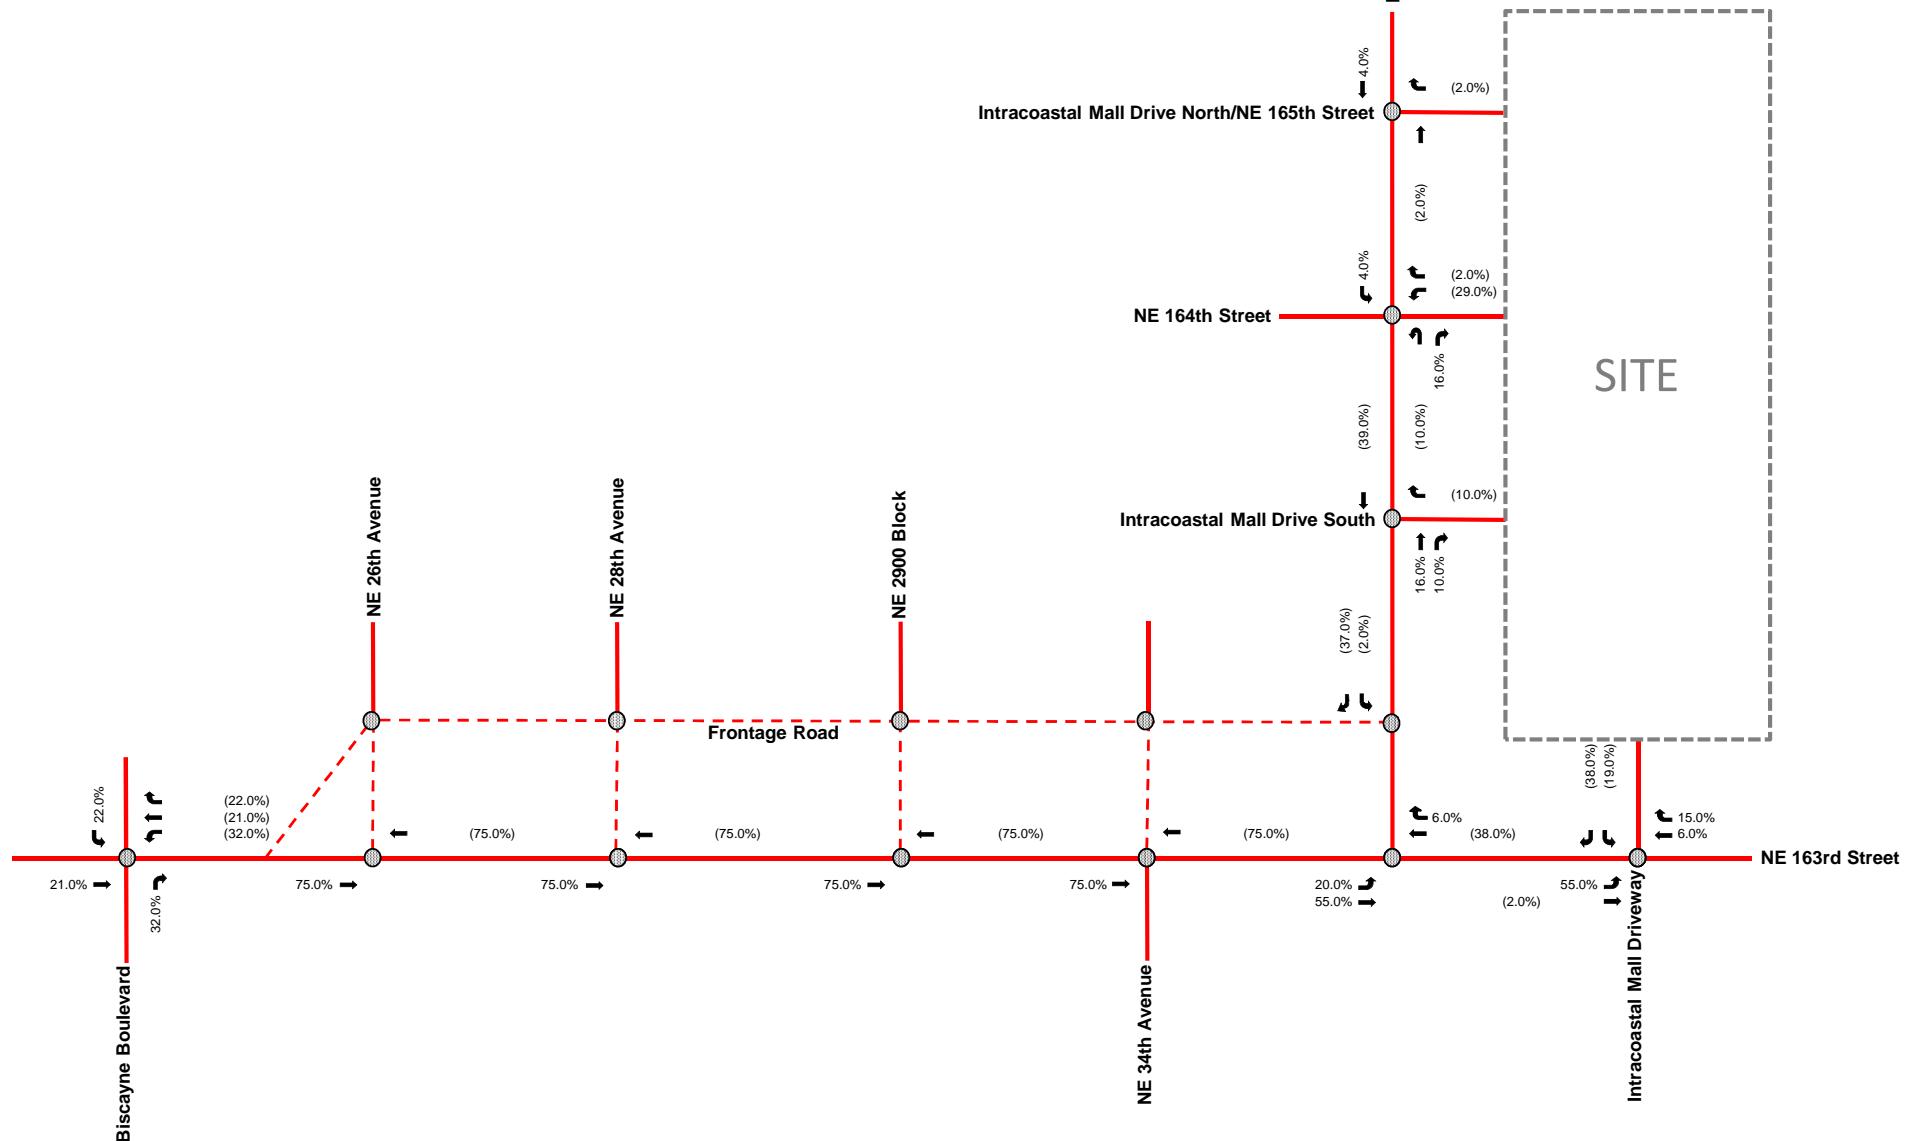

Figures 4 through 11 present the peak hour net new trip distribution, peak hour net new trip assignment, peak hour pass-by trip distribution, and peak hour pass-by assignment. Future total with no roadway improvements is shown in Figures 4, 6, 8, and 10. The future total with improvements distribution and assignment is modified to account for the full-access driveway at the Intracoastal Mall Driveway as shown in Figures 5, 7, 9, and 11.

## FUTURE TOTAL TRAFFIC

Future total traffic conditions are defined as the expected traffic conditions in the year 2031 with project traffic. Future total traffic volumes considered in the analysis for this project are the sum of the year 2031 background traffic volumes and the expected project traffic volumes. The A.M. and P.M. peak hour future total traffic volumes with no roadway improvements are shown in Figure 12. Future total with improvements volumes include the eastbound exit from the proposed site as well as the eastbound entrance at the intersection of SR 826/NE 163<sup>rd</sup> Street and Intracoastal Mall Driveway as shown in Figure 13. Volume development worksheets for the study intersections are included in Appendix F.

## INTERSECTION CAPACITY ANALYSIS

Operating conditions were analyzed for the study intersections. Four (4) scenarios (existing conditions, future background conditions, future total conditions with no roadway improvements, and future total conditions with improvements were analyzed using Trafficware's *SYNCHRO* software, which applies methodologies outlined in the Transportation Research Board's (TRB's), *Highway Capacity Manual*, 2000/2010/6<sup>th</sup> Editions. Intersection capacity analysis worksheets for the study intersections are included in Appendix K. A summary of the intersection analyses is presented in Table 3 and Table 4.

The results of the intersection capacity analyses indicate that the study intersections are expected to operate at City of North Miami Beach's adopted levels of service (LOS) or better under existing, future background without project, and future total with project and improvements during the A.M and P.M. peak hours. Note that the intersection of SR 826/NE 163rd Street and Biscayne Boulevard/US-1 is expected to operate at LOS F under future total conditions without improvements.

The project proposes improvements including signalizing the intersection of SR 826/NE 163<sup>rd</sup> Street and Intracoastal Mall Driveway, the addition of one (1) southbound left-turn lane, the addition of one (1) eastbound left-turn lane, and the addition of one (1) receiving lane to the west leg. The new signal would operate similar to the current operations of the signalized intersection of SR 826/NE 163<sup>rd</sup> Street and NE 35<sup>th</sup> Avenue with eastbound partial continuous green T-intersection, signalized southbound left- and right-turn lanes, signalized eastbound left-turn lanes, and signalized westbound through and right-turn lanes. Furthermore, the proposed improvements include the addition of one (1) eastbound left-turn lane at the intersection of SR 826/NE 163<sup>rd</sup> Street and NE 35<sup>th</sup> Avenue and the elimination of the exclusive westbound left-turn lane along Frontage Road at NE 34<sup>th</sup> Street. The intersection of SR 826/NE 163<sup>rd</sup> Street and NE 35<sup>th</sup> Avenue is proposed to be modified to remove the eastbound partial continuous green T-intersection as well as the exclusive pedestrian phase. The configuration of this intersection is proposed to include signalized eastbound through and left-turn lanes, signalized southbound left and right-turn lanes, and signalized westbound through and shared through/right-turn lanes. The

proposed improvements satisfy the City of North Miami Beach's Eastern Mixed-Use Waterfront District (MU/EWF) code requirements by providing for multiple access points with direct east and west access to and from SR 826/NE 163<sup>rd</sup> Street and traffic mitigation such that the development does not over burden NE 35<sup>th</sup> Avenue.

Vertical and horizontal sight distance analysis was prepared for the westbound approach at the proposed signalized intersection of SR 826/NE 163<sup>rd</sup> Street and Intracoastal Mall Driveway as requested by FDOT. The results of the analysis reveal that 745 feet of vertical sight distance for the westbound approach at the proposed signal is required utilizing a 40-mph design speed (roadway is posted at 35 mph) and 1,333.48 feet are provided. Therefore, the vertical sight distance criteria is satisfied. The horizontal sight distance based on a 40-mph design speed, results in a 1.02 foot inside shoulder where a 4-foot shoulder is provided. Therefore, the horizontal sight distance criteria is satisfied. Detailed calculations and graphics are provided in Appendix G.

## QUEUE LENGTH ANALYSIS

A 95<sup>th</sup> percentile queue analysis was performed to identify the expected vehicle queues at the intersections of SR 826/NE 163<sup>rd</sup> Street at NE 35<sup>th</sup> Avenue and SR 826/NE 163<sup>rd</sup> Street at Intracoastal Mall Driveway. The eastbound left-turn lanes and southbound left-turn and right-turn lanes queues were examined. The westbound approach queue at the intersection of SR 826/NE 163<sup>rd</sup> Street and Intracoastal Mall Driveway was also examined. The queue length analysis was prepared for existing, future background, future total, and future total with improvements analysis conditions. The 95<sup>th</sup> percentile queue lengths were calculated using Trafficware's SYNCHRO 10 software. The results of the queue length analysis are summarized in Table 5 and Table 6. Synchro worksheets for the study intersections are included in Appendix K. The results of the analysis indicate that the overall combined left-turn and right-turn lane queues along NE 35<sup>th</sup> Avenue are expected to decrease under future total with improvements conditions when compared to future background conditions and future total conditions. Additionally, the eastbound left-turn storage lanes are able to accommodate the expected vehicle queues along SR 826/NE 163<sup>rd</sup> Street at NE 35<sup>th</sup> Avenue and Intracoastal Mall Driveway under future total with improvements conditions. Furthermore, the westbound through-lane queues at Intracoastal Mall Driveway are not expected to extend to the bridge gates on SR 826/NE 163<sup>rd</sup> Street for when the bridge is drawn closed. The bridge gates are located approximately 876 feet from the westbound stop bar at the proposed traffic signal.

Table 5: A.M. Peak Hour Queuing Analysis			
Existing Conditions (Future Background Conditions) [Future Total Conditions] {Future Total Conditions with Improvements}			
Intersection	Movement	95 <sup>th</sup> Percentile Queue (ft) <sup>(1)</sup>	Provided Storage Length (ft)
SR 826/NE 163 <sup>rd</sup> Street and NE 35 <sup>th</sup> Avenue	Eastbound Left-Turn	230 (257) [#410] {103}	348 <sup>(2)</sup> (348) <sup>(2)</sup> [348] <sup>(2)</sup> {318} <sup>(3)</sup>
	Southbound Left-Turn	#223 (#266) [#491] {177}	300 (300) [300] {300}
	Southbound Right-Turn	235 (261) [389] {336}	(4)
SR 826/NE 163 <sup>rd</sup> Street and Intracoastal Mall Driveway	Eastbound Left-Turn	(5) ( <sup>(5)</sup> ) [ <sup>(5)</sup> ] {179}	(5) ( <sup>(5)</sup> ) [ <sup>(5)</sup> ] {300}

Approximately 876 feet of storage length is provided.# 95<sup>th</sup> percentile volume exceeds capacity, queue may be longer.m 95<sup>th</sup> percentile queue is metered by upstream signal.

## SIGNAL WARRANT ANALYSIS

A signal warrant analysis was performed at the intersection of SR 826/NE 163<sup>rd</sup> Street and Intracoastal Mall Driveway. The signal warrant analysis was performed based upon criteria contained in the Federal Highway Administration's (FHWA's) *Manual on Uniform Traffic Control Devices* (MUTCD), 2009 Edition. Appendix L includes the signal warrant analysis data. The signal warrant analysis evaluated expected traffic conditions in 2031 under future total with improvements conditions. SR 826/NE 163<sup>rd</sup> Street is considered the major street approach and the Intracoastal Mall Driveway is considered the minor street approach in this analysis.

Traffic volumes for major street approach movements were obtained from existing 24-hour traffic volume counts, background traffic growth, and project trip generation, distribution, and assignment. Traffic volumes for minor street approach movements were obtained from the project trip generation, distribution, and assignment. The 24-hour traffic volume counts were collected along SR 826/NE 163<sup>rd</sup> Street between NE 35<sup>th</sup> Avenue and Intracoastal Mall Driveway on May 30, 2019 (Thursday). The volumes were collected in 15-minute intervals and were adjusted to peak season conditions using the FDOT peak season factor of 1.03. The 24-hour traffic volume counts and FDOT peak season factor category report are included in Appendix C.

The residential, hotel, health/fitness, office, and retail daily traffic was distributed based on each land use's hourly variations contained in Appendix A of ITE's *Trip Generation Manual*, 10<sup>th</sup> Edition.

Under future total with improvements conditions, the intersection of SR 826/NE 163<sup>rd</sup> Street and Intracoastal Mall Driveway is proposed to include an exclusive right-turn lane and an exclusive left-turn lane at the southbound approach, three (3) through lanes and an exclusive left-turn lane for the eastbound approach, and four (4) through lanes and an exclusive right-turn lane for the westbound approach.

The projected future volumes at the intersection of SR 826/NE 163<sup>rd</sup> Street and Intracoastal Mall Driveway were compared to criteria contained in the MUTCD for the following volume warrants:

- Warrant Number 1: Eight-Hour Vehicular Volume Warrant
  - Condition A: Minimum Vehicular Volume
  - Condition B: Interruption of Continuous Traffic
  - Combination: Combination of Conditions A & B
- Warrant Number 2: Four-Hour Vehicular Volume Warrant
- Warrant Number 3: Peak Hour Warrant

Note that Warrant 4-9 are not applicable in this analysis.

Right-turn volume reductions based on ITE documents from the Alabama Department of Transportation as provided by Miami-Dade County Department of Transportation and Public Works – Traffic Engineering Division (TED) were considered to provide for a conservative volume analysis. The Pagone's Theorem is referred to in the reference documents. This theorem stipulates various right-turn volume reductions for minor-street approaches based on the ratio of the right-turn volume to approach volume or minor street lane configuration. Table 7 summarizes the relevant right-turn volume reduction. The reduction was applied to the minor-street right-turn volume on an hourly basis.

<b>Table 7: Pagone's Theorem Hourly Right-Turn Volume Reduction</b>			
<b>Situation</b>	<b>Minor-Street Approach Configuration</b>	<b>Right-Turn Percentage</b>	<b>Right-Turn Reduction</b>
2	Exclusive left, shared through/right lane	$R > 3T$	60%
2	Exclusive left, shared through/right lane	$3T \geq R \geq T/3$	30%
2	Exclusive left, shared through/right lane	$\leq T/3$	20%
3	<b>Any configuration with an exclusive right turn lane (usually <math>\geq</math> 600 feet long)</b>	-	<b>75%</b>
4	Shared left/through and shared through/right lane	$> (T + L)$	65%
4	Shared left/through and shared through/right lane	$L > (T + R)$	Use Situation 2
4	Shared left/through and shared through/right lane	$L = T = R$	40%
4	Shared left/through and shared through/right lane	$L = T > 3R$	20%
4	Shared left/through and shared through/right lane	$R = T > 3L$	50%
4	Shared left/through and shared through/right lane	All other cases	30%

Based upon Pagone's Theorem, a 75 percent (75%) reduction was applied to the southbound right-turn projected volumes at project build-out at the proposed signal. The signal warrant analyses are summarized in Table 12 and are included in more detail in Appendix L. As Table 8 indicates, the intersection satisfies Warrant 2 and Warrant 3 under future total conditions.

**Table 8: Signal Warrant Analysis Summary**

MUTCD Warrant	Future Total Conditions
Warrant No. 1, Condition A – Eight-Hour Vehicular Volume	Not Satisfied
Warrant No. 1, Condition B – Eight-Hour Vehicular Volume	Not Satisfied
Warrant No. 1 – Combination of Condition A & B	Not Satisfied
Warrant No. 2 – Four-Hour Vehicular Volumes	<b>Satisfied</b>
Warrant No. 3 – Peak Hour	<b>Satisfied</b>

## CONCLUSION

Dezer Intracoastal Mall, LLC is proposing to redevelop the property located at 3789 NE 163<sup>rd</sup> Street in North Miami Beach, Florida. The site proposed for redevelopment is currently occupied by 189,026 square feet of shopping center and a 45,000 square-foot supermarket. The proposed redevelopment consists of 200,000 square feet of office space, 280,000 square feet of shopping center, a 50,000 square-foot supermarket, 45,000 square feet of gym space, 2,000 multifamily residential units (35 Low-Rise, 48 Mid-Rise, and 1917 High-Rise units), and a 250-room hotel. The redevelopment is expected to be completed by year 2031.

Access to the existing development is provided via one (1) limited-access (right-in/right-out) driveway along NE 163<sup>rd</sup> Street east of NE 35<sup>th</sup> Avenue, one (1) full-access driveway at the signalized intersection of NE 164<sup>th</sup> Street and NE 35<sup>th</sup> Avenue, and one (1) limited-access (right-in/right-out/left-out) driveway at the intersection of NE 35<sup>th</sup> Avenue and Intracoastal Mall Driveway.

The project proposes improvements including signalizing the intersection of SR 826/NE 163<sup>rd</sup> Street and Intracoastal Mall Driveway, the addition of one (1) southbound left-turn lane, the addition of one (1) eastbound left-turn lane, and the addition of one (1) receiving lane to the west leg. The new signal would operate similar to the current operations of the signalized intersection of SR 826/NE 163<sup>rd</sup> Street and NE 35<sup>th</sup> Avenue with eastbound partial continuous green T-intersection, signalized southbound left- and right-turn lanes, signalized eastbound left-turn lanes, and signalized westbound through and right-turn lanes. Furthermore, the proposed improvements include the addition of one (1) eastbound left-turn lane at the intersection of SR 826/NE 163<sup>rd</sup> Street and NE 35<sup>th</sup> Avenue and the elimination of the exclusive westbound left-turn lane along Frontage Road at NE 34<sup>th</sup> Street. The intersection of SR 826/NE 163<sup>rd</sup> Street and NE 35<sup>th</sup> Avenue is proposed to be modified to remove the eastbound partial continuous green T-intersection as well as the exclusive pedestrian phase. The configuration of this intersection is proposed to include signalized eastbound through and left-turn lanes, signalized southbound left and right-turn lanes, and signalized westbound through and shared through/right-turn lanes. The proposed improvements satisfy the City of North Miami Beach's Eastern Mixed-Use Waterfront

District (MU/EWF) code requirements by providing for multiple access points with direct east and west access to and from SR 826/NE 163<sup>rd</sup> Street and traffic mitigation such that the development does not over burden NE 35<sup>th</sup> Avenue.

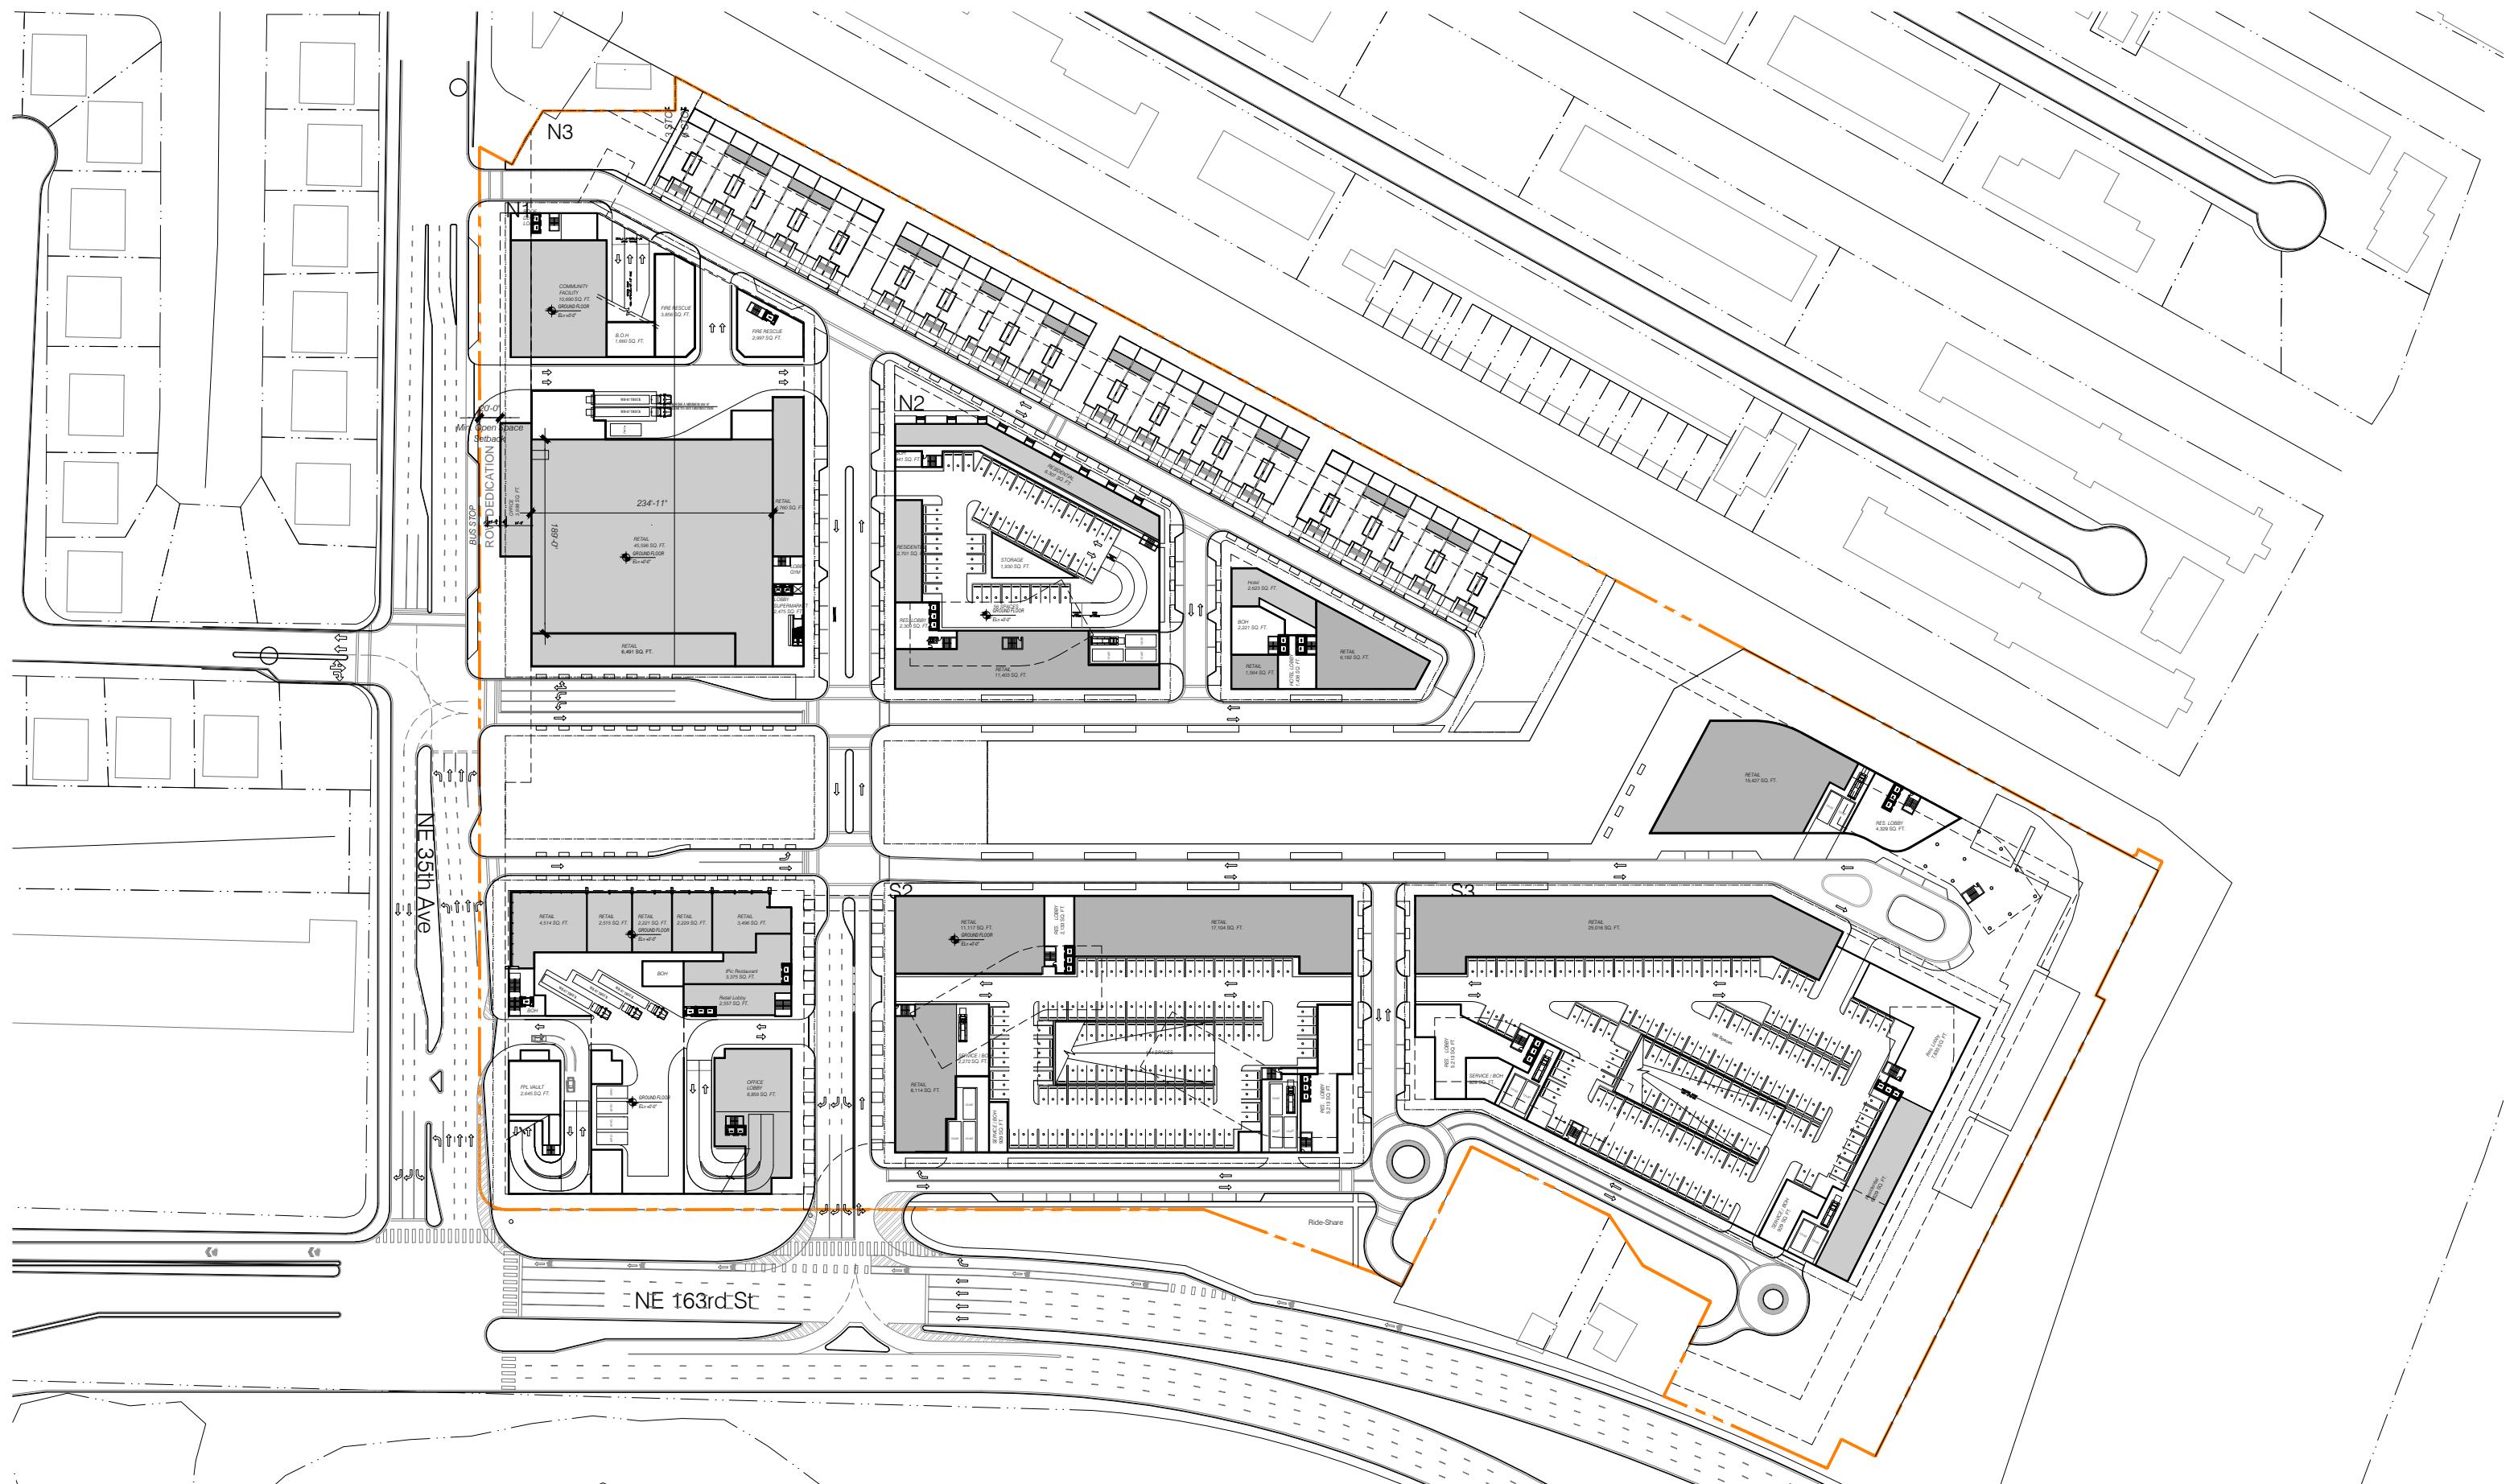

The results of the intersection capacity analyses indicate that the study intersections are expected to operate at City of North Miami Beach's adopted levels of service (LOS) or better under all analysis conditions during the A.M and P.M. peak hours.

A 95<sup>th</sup> percentile queue analysis was performed to identify the expected vehicle queues at the intersections of SR 826/NE 163<sup>rd</sup> Street at NE 35<sup>th</sup> Avenue and SR 826/NE 163<sup>rd</sup> Street at Intracoastal Mall Driveway. The eastbound left-turn lanes and southbound left-turn and right-turn lanes queues were examined. The westbound approach queue at the intersection of SR 826/NE 163<sup>rd</sup> Street and Intracoastal Mall Driveway was also examined. The queue length analysis was prepared for existing, future background, future total, and future total with improvements analysis conditions. The results of the analysis indicate that the overall combined left-turn and right-turn lane queues along NE 35<sup>th</sup> Avenue are expected to decrease under future total with improvements conditions when compared to future background conditions and future total conditions. Additionally, the eastbound left-turn storage lanes are able to accommodate the expected vehicle queues along SR 826/NE 163<sup>rd</sup> Street at NE 35<sup>th</sup> Avenue and Intracoastal Mall Driveway under future total with improvements conditions. Furthermore, the westbound through-lane queues at Intracoastal Mall Driveway are not expected to extend to the bridge gates on SR 826/NE 163<sup>rd</sup> Street for when the bridge is drawn closed.

A signal warrant analysis was conducted at the intersection of SR 826/NE 163<sup>rd</sup> Street and Intracoastal Mall Driveway under future total with improvements conditions and determined that the intersection satisfies Warrant 2 and Warrant 3. Therefore, a signal is recommended for installation at this intersection under future total with improvements conditions.

**Subject:** RE: Intracoastal Mall Redevelopment | New Alternative 2

Good morning Justin:

We have been coordinating with Joaquin Vargas regarding Alternative 2 on page 9 of the methodology attached. We had initially discussed a concept where we would not signalize the east driveway and maintain it as right-in/right-out but allow for a westbound u-turn maneuver at the intersection of NE 35<sup>th</sup> Avenue and NE 163<sup>rd</sup> Street. There were concerns regarding the weaving distance only approximately 300 feet between the right-in/right-out driveway and the intersection of NE 35<sup>th</sup> Avenue and NE 163<sup>rd</sup> Street. To mitigate that concern we are now proposing to extend the Frontage Road to the right-in/right-out driveway which would also facilitate the westbound u-turn maneuver at the intersection of NE 35<sup>th</sup> Avenue and NE 163<sup>rd</sup> Street. See the attached sketches of the proposed alternative. We believe this is a better solution than the proposed half signal as it does not result in needing a signal variance from FDOT and provides enhanced vehicle mobility by providing an additional access from the site for eastbound and westbound traffic.

Please let us know your thoughts.

North Miami Beach, Florida

## MEMORANDUM

To: Justin Proffit, AICP  
City of North Miami Beach

From: Adrian K. Dabkowski, P.E., PTOE *AKD*  
Maddy Hollowed *MH*

Date: May 31, 2019

**Subject: Intracoastal Mall Redevelopment**  
**Traffic Study Methodology**

The purpose of this memorandum is to summarize the traffic study methodology for the proposed redevelopment located at 3789 NE 163<sup>rd</sup> Street in North Miami Beach, Florida. Currently, the site proposed for redevelopment is occupied by 234,026 square feet of retail space. The proposed redevelopment consists of 345,000 square feet of retail space, 2,000 multifamily residential units, 200,000 square feet of office space, and 35,000 square feet of gym space. A conceptual site plan and a site location map are included in Attachment A. The following sections summarize our proposed traffic study methodology.

### TRIP GENERATION

Trip generation calculations for the existing and proposed redevelopment were performed using Institute of Transportation Engineers' (ITE) *Trip Generation Manual*, 10<sup>th</sup> Edition. Trip generation calculations for the proposed redevelopment were performed using ITE Land Use Codes (LUC) 820 (Shopping Center), 222 (Multifamily Housing [High-Rise])), 221 (Multifamily Housing [Mid-Rise])), 220 (Multifamily Housing [Low-Rise])), 710 (General Office Building), and 492 (Health/Fitness Club).

A multimodal (public transit, bicycle, and pedestrian) reduction of 10.0 percent (10.0%) was applied to the A.M. and P.M. peak hour trip generation calculations to account for the urban character of the area. Please note that Miami-Dade Transit (MDT) provides Metrobus transit Route 105 and Route 108 within the vicinity of the redevelopment. Additionally, the City of North Miami Beach provides the North Miami Beach Line trolley route A which operates within the vicinity of the redevelopment. Furthermore, a water taxi is proposed to operate along the Intracoastal between the proposed redevelopment and Sunny Isles Beach.

Internal capture is expected between the complementary land uses within the project. Internal capture trips for the project were determined based upon methodology contained in the ITE's, *Trip Generation Handbook*, 3<sup>rd</sup> Edition. Internal capture rates of 5.1 percent (5.1%) for the A.M. peak hour trip generation and 28.8 percent (28.8%) for the P.M. peak hour trip generation are expected for the proposed redevelopment.

Pass-by capture trip rates were determined based on average rates provided in the ITE's *Trip Generation Handbook*, 3<sup>rd</sup> Edition. The pass-by rate for the shopping center land use is 34 percent (34%) during the P.M. peak hour.

The proposed redevelopment results in 756 net new vehicle trips during the A.M. peak hour and 623 net new vehicle trips during the P.M. peak hour. Detailed trip generation calculations are included in Attachment B.

## DATA COLLECTION

The peak periods selected for this study include typical weekday (Tuesday, Wednesday, or Thursday) 7:00 to 9:00 A.M. and 4:00 to 6:00 P.M. peak periods. Turning movement counts will be collected in 15-minute intervals during the peak periods. Turning movement counts will also include pedestrian, bicycle, and truck data. All traffic counts will be adjusted to peak season conditions using the appropriate Florida Department of Transportation (FDOT) peak season category factors. Traffic signal timing information will be obtained from Miami-Dade County Department of Transportation and Public Works – Signals and Signs Division. All traffic data collected will be provided in the Appendix of the traffic impact study.

## STUDY AREA

The following intersections will be examined as part of the study area:

- NE 163<sup>rd</sup> Street/SR 826 and Biscayne Boulevard/US 1
- NE 163<sup>rd</sup> Street/SR 826 and NE 26<sup>th</sup> Avenue
- NE 163<sup>rd</sup> Street/SR 826 and NE 28<sup>th</sup> Avenue
- NE 163<sup>rd</sup> Street/SR 826 and NE 2900 Block
- NE 163<sup>rd</sup> Street/SR 826 and NE 34<sup>th</sup> Avenue
- NE 163<sup>rd</sup> Street/SR 826 and NE 35<sup>th</sup> Avenue
- NE 163<sup>rd</sup> Street/SR 826 and Intracoastal Mall Driveway
- NE 164<sup>th</sup> Street and NE 35<sup>th</sup> Avenue

## TRIP DISTRIBUTION

The likely distribution of project traffic was forecast for the trips expected to be generated by the proposed development. The trip distribution was based on an interpolated cardinal trip distribution for the project site's traffic analysis zone (TAZ) for the years 2010 and 2040 for the project's opening year of 2031 obtained from the Miami-Dade Metropolitan Planning Organization's (MPO) *2040 Long Range Transportation Plan Directional Trip Distribution Report*. The project is located within TAZ 91. The cardinal distribution is included in Attachment C.

## BACKGROUND GROWTH RATE

A background growth rate will be calculated based on historic growth trends at nearby FDOT traffic count stations. Additionally, growth rates based on the Florida Standard Urban Transportation Model Structure (FSUTMS) Southeast Regional Planning Model (SERPM) projected 2010 and 2040 model network volumes will be examined. The higher of the two (2) growth rates will be used in the analysis.

## CAPACITY ANALYSIS

Capacity analyses will be conducted for the A.M. and P.M. peak hours at the study intersections. Intersection analyses will be performed using Trafficware's *Synchro* traffic engineering analysis software, which applies methodologies outlined in the Transportation Research Board's (TRB's) *Highway Capacity Manual* (HCM), 2000/2010/6<sup>th</sup> Editions.

Capacity analyses will be conducted for five (5) scenarios: existing, build-out year without project, build-out year with project, build-out year with project and Alternative 1 geometry, and build-out year with project and Alternative 2 geometry. Schematic sketches of the proposed roadway alternative improvements are contained in Attachment A. The anticipated build-out year is 2031. If intersection or roadway segment deficiencies are identified, strategies and improvements will be developed as mitigation measures.

The following graphics will be included for the study intersections:

- Existing conditions
- Trip distribution
- Trip assignment
- Future background traffic conditions (with growth rate)
- Future total traffic conditions (with project and without roadway improvements)
- Future total traffic conditions (with project and with Alternative 1 roadway improvements)
- Future total traffic conditions (with project and with Alternative 2 roadway improvements)

## **TRAFFIC SIGNAL WARRANT ANALYSIS**

A traffic signal warrant analysis at the proposed project intersection with SR 826/NE 163<sup>rd</sup> Street as part of Alternative 2 will be prepared. The analyses will be prepared for future total conditions with the proposed development in place. The signal warrant analyses will apply the project's traffic generation volumes and hourly distribution developed from ITE's *Trip Generation Manual*, 10<sup>th</sup> Edition, ITE's *Trip Generation Handbook*, 3<sup>rd</sup> Edition, cardinal distribution, and the trip distribution/assignment to the existing traffic volumes. Those volumes will be compared to the volume traffic signal warrants contained in the of the Federal Highway Administration's (FHWA), *Manual on Uniform Traffic Control Devices* (MUTCD), 2009.

## **GARAGE ENTRY GATE OPERATIONS ANALYSIS**

If entry gates are proposed, an entry gate analysis will be prepared for parking garage entry points. The entry gate queuing analysis will be prepared for the weekday A.M. and P.M. peak hours. Entry gate queuing analysis will be conducted consistent with the procedures outlined in *Parking Structures – Planning, Design, Construction, Maintenance, and Repair*, 2000 and 2011. The purpose of this analysis is to determine any future queue storage deficiencies at the entry gates and provide preliminary recommendations for mitigating these deficiencies.

## **DOCUMENTATION**

The results of the traffic analysis and signal warrant analysis will be summarized in a report. The report will include supporting documents including signal timings, lane geometry, and software output sheets. The report will also include text and graphics necessary to summarize the assumptions and analysis.

## *View from Top of Bridge*

**Exhibit 3-54. Diagram Illustrating Components for Determining Horizontal Sight Distance**

**US Customary**

---

$$HSO = R \left[ \left( 1 - \cos \frac{28.65S}{R} \right) \right] \quad (3-38)$$

where:

*S* = Stopping sight distance, ft  
*R* = Radius of curve, ft  
*HSO* = Horizontal sightline offset, ft

S =	389.2 ft	Per FDM Table 210.11.1 <b>DS=40 mph</b> , 5% downgrade, S = 326 ft (req'd)
R =	1892 ft	Radius = $1885.86 + 12/2 = 1915.86$ ft (Radius along centerline of inside lane)
HSO =	10.00 ft	
Lane Width =	12 ft	
Shoulder Width =	4.00 ft	<u>Existing shoulder width = 4-ft, Criteria met for DS=40mph</u>

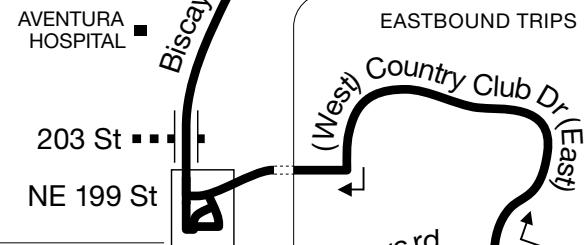

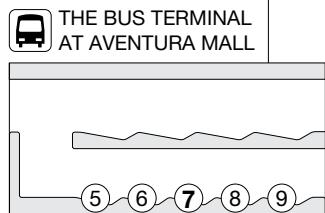

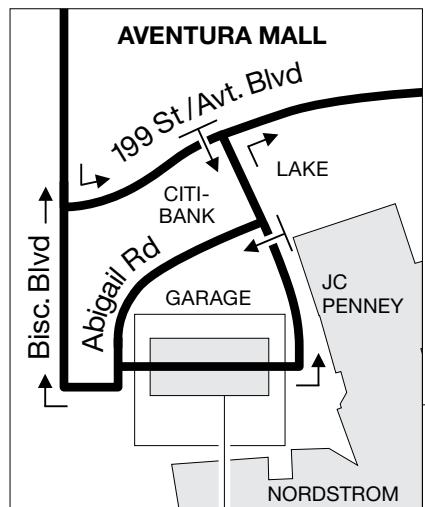

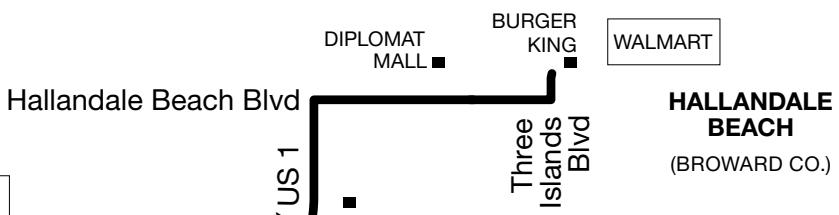

S =	389.2 ft	Per FDM Table 210.11.1 <b>DS=45 mph</b> , 5% downgrade, S = 392 ft (req'd)
R =	1892 ft	Radius = $1885.86 + 12/2 = 1915.86$ ft (Radius along centerline of inside lane)
HSO =	10.0 ft	
Lane Width =	12 ft	
Shoulder Width =	4.00 ft	Existing shoulder width = 4-ft

Existing shoulder width is 99.3% compliant ( $389.2/392 *100\%$ ) for **DS=45 mph**

## Riding the B is Free!

Take the sting out of paying high gas prices and ride the B-Line for free. This service operates Monday thru Saturday in North Miami Beach, and anyone can ride. Check the schedule, download our new NMB Transit App, or visit [www.citynmb.com](http://www.citynmb.com) and hop on the trolley at marked B-Line bus stops.

## Make the Connection

The B-Line has expanded service with two new routes and more connections than ever before. Connect with the City of North Miami and Sunny Isles Beach shuttle services, as well as Miami-Dade Transit, all along the new routes and at their Terminal at 163rd Street Mall. The B-Line is a great free-B in NMB.

## It's a Cool Ride

Enjoy an air-conditioned ride with free WiFi on board to the store, mall, park, library, city hall or any of the many destinations offered.

## We're Accessible

All of the B-Line trolleys are equipped to accommodate conventional and motorized wheelchairs.

Intersection Summary

HCM 6th Ctrl Delay	55.7
HCM 6th LOS	E

Notes

\* HCM 6th computational engine requires equal clearance times for the phases crossing the barrier.

Unsignalized Delay for [WBR] is excluded from calculations of the approach delay and intersection delay.

Notes

\* HCM 6th computational engine requires equal clearance times for the phases crossing the barrier.

Unsignalized Delay for [WBR] is excluded from calculations of the approach delay and intersection delay.

Intersection Summary

HCM 6th Ctrl Delay                            88.7  
HCM 6th LOS                                    F

Notes

\* HCM 6th computational engine requires equal clearance times for the phases crossing the barrier.

Unsignalized Delay for [WBR] is excluded from calculations of the approach delay and intersection delay.

Intersection Summary

HCM 6th Ctrl Delay	86.9
HCM 6th LOS	F

Notes

\* HCM 6th computational engine requires equal clearance times for the phases crossing the barrier.

Unsignalized Delay for [WBR] is excluded from calculations of the approach delay and intersection delay.

Intersection Summary

HCM 6th Ctrl Delay                            106.5  
HCM 6th LOS                                    F

Notes

\* HCM 6th computational engine requires equal clearance times for the phases crossing the barrier.

Unsignalized Delay for [WBR] is excluded from calculations of the approach delay and intersection delay.

Intersection Summary

- Volume exceeds capacity, queue is theoretically infinite.  
Queue shown is maximum after two cycles.
- # 95th percentile volume exceeds capacity, queue may be longer.  
Queue shown is maximum after two cycles.
- m Volume for 95th percentile queue is metered by upstream signal.

# **Appendix L**

## Signal Warrant Analysis

Pagone's Theorem			
Situation	Approach Configuration	Condition	Reduction of right turns
1	Shared left/through right	$R > 0.7A$	Reduce R by 60 percent
		$0.7A \geq R > 0.35A$	Reduce R by 30 percent
		$R \leq 0.35A$	Reduce R by 20 percent
2	Exclusive left, shared through/right	$R > 3T$	Reduce R by 60 percent
		$3T \geq R \geq T/3$	Reduce R by 30 percent
		$R \leq T/3$	Reduce R by 20 percent
3	Any configuration with an exclusive right turn lane (usually $\geq 600$ feet long)		Reduce R by 75 percent in all cases
4	Shared left/through and shared through/right	$R > (T+L)$	Reduce R by 65 percent
		$L > (T+R)$	Use Situation 2
		$L = T = R (\pm 10 \text{ vehicles})$	Reduce R by 40 percent
		$L = T > 3R$	Reduce R by 20 percent
		$R = T > 3L$	Reduce R by 50 percent
		All other cases	Reduce R by 30 percent
5	Exclusive left, exclusive through and shared through/right	$R > T$	Reduce R by 75 percent
		$T \geq R \geq T/2$	Reduce R by 50 percent
		$T/2 \geq R > T/4$	Reduce R by 30 percent
		$R \leq T/4$	Reduce R by 15 percent

**CITY OF NORTH MIAMI BEACH SUPPORT LETTER**  
**DATED JUNE 23, 2020**

# ***City of North Miami Beach, Florida***

***Office of the City Manager***

June 23, 2020

Mr. Ali Al-Said, P.E.  
Florida Department of Transportation, District Six  
District Permits Engineer  
1000 NW 111<sup>th</sup> Avenue, Room 6207  
Miami, Florida 33172

**Re: Intracoastal Mall Redevelopment  
Driveway/Connection Application  
3881 NE 163<sup>rd</sup> Street, North Miami Beach, Florida**

Dear Mr. Al-Said:

Developer Dezer International, LLC has applied for a development agreement from the City of North Miami Beach for the redevelopment of the Intracoastal Mall at 3881 NE 163<sup>rd</sup> Street. Accompanying the development agreement is a traffic impact study demonstrating the project's compliance with the City's Code and Comprehensive Plan and numerous improvements to SR 826/NE163rd Street. Also included in the traffic impact study is a plan and analysis for the construction of a signalized intersection providing direct east and west access to and from the Intracoastal Mall and SR 826/NE 163<sup>rd</sup> Street.

The developer is proposing the signalized intersection to satisfy the City's Zoning Code Sections 24-58.7(O)(2)(e) and 24-58.7(P)(2)(a), which require that a direct east and west access to the Intracoastal Mall be provided to and from SR 826/NE 163<sup>rd</sup> Street. Furthermore, the proposed improvements on SR 826/NE 163<sup>rd</sup> Street transform the current suburban characteristics of the roadway into an urban thoroughfare, in line with the urban vision of the City of North Miami Beach. The goal of the SR 826/NE 163<sup>rd</sup> Street direct east and west access is that NE 35<sup>th</sup> Avenue is not overburdened.

The City of North Miami Beach supports the proposed signalized intersection at the existing Intracoastal Mall Driveway and SR 826/NE 163<sup>rd</sup> Street and proposed improvements at the intersection of SR 826/NE 163<sup>rd</sup> Street and NE 35<sup>th</sup> Avenue. Therefore, the City of North Miami Beach urges the Florida Department of Transportation to approve the requested signalized intersection at the existing Intracoastal Mall Driveway and SR 826/NE 163<sup>rd</sup> Street. Please note the development agreement and accompanying traffic circulation plan are subject to the approval of the North Miami Beach City Commission. This letter does not provide a vested right to the applicant.

Please feel free to contact me if you have any questions. We look forward to working with the Department on the approval of this application.

Sincerely,

A handwritten signature in blue ink, appearing to read "B. Scott".

Esmond K. Scott  
City Manager
